Building Future Skills for Western Australia

OFFICIAL

Delivering future skills for WA

With a network of connected training facilities across Perth, North Metropolitan TAFE (NMTAFE) trains more than 30,000 students annually for jobs across the Western Australian (WA) economy, including a wide range of trades.

We are working with the building and construction industry to meet the growing workforce needs of the sector, with capability in our training and partnerships in residential and commercial construction.

Meeting industry's needs with fit-for-purpose programs

Guided by our industry partnerships, NMTAFE is at the forefront of training for the future by incorporating modern methods, emerging technologies, sustainability, and automation into our programs.

As the construction industry evolves, the demand for professionals with expertise across construction and electrical trades will rise to support the development, construction, and maintenance of modern and technology-enabled infrastructure.

Our skilled lecturers are prepared with a range of future-focused enhancements to our training programs, learning environments, workshops, equipment, and resources.

Leading the way with state-of-the-art facility

Our new \$51 million state-of-the-art Construction Skills Innovation Hub at Balga Campus delivers training across an extensive range of skills that contributes to a thriving WA building and construction industry.

The hub is poised to meet the industry's current and future skill requirements with:

- Future trades workshop that focuses on leading-edge electrical and digital skills for smart home automation
- Computer Aided Design (CAD) laboratories that are linked to advanced, high-value workshop equipment
- Resource centre and student learning hub that showcases new, emerging building products and provides virtual reality (VR) technology-enabled learning
- Classrooms that are digitally enabled and flexible, open learning spaces

The enhancements at this cornerstone construction campus build on our existing high quality trades training capacity and capability across Balga, Clarkson, and Midland, where we deliver skills to more than 4,500 construction sector pre-apprentices, apprentices, and general students each year.
